

General Mitchell International Airport

# Everbridge Contact Information

General Mitchell International Airport uses Everbridge Suite as the Emergency Notification System to notify stakeholders of emergencies and other important messages. Please provide your contact information for the communication media in which you want to receive these notifications.

There are two types of notification that GMIA uses: Informational and Emergency.

**Informational Notices** – are sent out via email, text, and fax only. Examples of these types of messages are Snow Alerts, Irregular Operations, Power Outages, etc.

**Emergency Notifications** – are sent out via any communication path that you provide and require you to acknowledge that you received the message. The system will continue to contact you until you confirm you received the message. Examples of these types of messages are Tornado Warning, Evacuation, Alert 3, and Active Shooter.

The Caller ID for the Everbridge Notifications is (414) 769-3975 and for text messages the SMS ID is 89361.

\*Remember, you do not have to provide all communication paths, only the paths you prefer.
